

# FORTRESS™ INTERNAL STRAP SYSTEM

CUSTOM GRAIN COVER SOLUTIONS

## Product Description

FORTRESS™ Internal Strap Systems are designed to provide secondary grain cover protection and is available with any of our standard GrainMax™ and Protector™ grain cover solutions.

The design integrates a strapping system which is built directly into the cover, allowing for ease of installation. The quantity of straps depends upon the amount of reinforcement required for each unique installation. FORTRESS™ Internal Strap Systems are manufactured with 2 inch wide high-tenacity webbing with a 9,000 lb. tensile strength. The system includes 2" ratchets, that can be mounted to the containment wall or earth anchors to keep the cover held tightly to the grain pile.

FORTRESS™ Internal Strap Systems are available in Oval, Rectangle, and Round grain covers, individual strap spacing options listed below:

- GrainMax™ strap system spacing options: 13.5' or 27'
- Protector™ strap system spacing options: 12' or 24'

**\*\*RAVEN ACCEPTS RETURNS ON QUALIFIED STRAP, REGARDLESS OF WHERE IT WAS PURCHASED!**

## Product Use

The FORTRESS™ Internal Strap System provides added insurance to keep your grain cover in place during unexpected power-outages, aeration system failures, fumigation down-time, and overall general maintenance work. Designed to act as secondary protection, FORTRESS™ Internal Strap Systems are not intended to replace or eliminate an aeration system.
