*CUSTOM OPTIONS ALSO AVAILABLE

50 / 50 FOLD

The 50/50 fold is used to provide easy deployment of single piece covers.

INSTALLATION GUIDES, DRAWINGS, AND DEPLOYMENT INSTRUCTIONS CAN BE FOUND ONLINE AT: <http://ravenefd.com/installation>

PRIOR TO INSTALLATION: Check weather conditions prior to starting your installation, do not try to deploy covers in windy conditions. During and after deployment, some type of ballast must be used to prevent wind from taking control of the cover material, aeration fans may also be utilized. Typically, sandbags are used for ground piles without aeration and should be placed as required to prevent damage to the cover during installation.

Depending on the current wind conditions, the crew should be able to take advantage of a slight breeze by pumping a layer of air under the cover to help float the material while deploying. If at any time the air underneath becomes too excessive, the deployment crew should pull the cover closer to ground level to help push out some of the air. If an unexpected wind gust comes up during deployment, the crew should hold the leading edge of the cover material down to the grain pile to avoid wind lift. If uncontrolled wind lift occurs, immediately stay clear of the cover to avoid injury.

Note: To the best of our knowledge, these are typical installation procedures and are intended as guidelines only.
